

Rachit Revalia

Date of birth: 17/06/2005 | Gender: Male | Nationality: Indian | Mobile phone: +358 417266266
| Email address: rachit.revalia@gmail.com | LinkedIn: <https://www.linkedin.com/in/rachitrevalia/> Instagram: https://www.instagram.com/rachit_revalia/ Github: <https://github.com/rachitrevalia> Personal Website: <https://portfolio-rachit-revalias-projects.vercel.app> | Currently Located address: Epelenberg 297, 4817CJ, Breda (Netherlands)

🌐 Language Skills

- **Hindi:** Mother tongue
- **English**
 - Listening: C2
 - Reading: B2
 - Spoken production: B2
 - Spoken interaction: B2
 - Writing: C1

★ Skills

Computer Skills:

- programming: Python, MATLAB and SQL
- Frameworks and Libraries: FastAPI, Open CV, Tensorflow, Keras, Pandas, Seaborn, Plotly, Streamlit)
- GIT version control, Linux Command
- React.js
- develop predictive models
- Basic coding skills (HTML, CSS, Javascript)
- data engineering
- DSA(Data Structure and Algorithms)
- Microsoft Office package: Microsoft Word, Excel, PowerPoint, Access
- Linux (Terminal Commands, Bash/Shell)
- Web framework: Django
- Python Flask (intermediate)

Soft skills:

- Able to adapt to new situations and system.
- Critical thinking and analysis
- Good listener and communicator
- Team Work & Team Player
- Research and analytical skills

👤 About myself

Driven student eager to apply theoretical knowledge in practical settings and acquire valuable hands-on experience within a professional environment. Demonstrates strong teamwork and analytical capabilities, coupled with a track record of rapid adaptation and learning.

💼 Work experience

Coders – AI Training

01/11/2024 – 02/12/2024

Outlier | Jyväskylä, Finland

- **Evaluated and enhanced AI-generated code** by assessing its quality and providing detailed feedback and rationales.
- **Solved complex coding challenges** by writing functional, efficient, and optimized solutions in Python.
- **Developed robust test cases** to ensure code reliability and maintainability.
- **Authored clear and human-readable explanations** of coding problems, solutions, and their underlying logic.
- **Explored alternative problem-solving approaches** with detailed documentation to guide AI improvement efforts.
- **Contributed to the training of large language models** for generative AI applications, focusing on code-writing capabilities.

🎓 Education & Training

Bachelors of Engineering in Information and Communication Technology

08/2023 – Current

JAMK University of Applied Sciences | Jyväskylä, Finland

Field(s) of study: Information and Communication Technologies | **Website:** <https://www.jamk.fi/fi>

Exchange Programme – Applied Data Science & Artificial Intelligence

09/2025 – 06/2026

Breda University of Applied Sciences | Breda, Netherlands

Field(s) of study: Applied Data Science and Artificial Intelligence | **Website:** <https://www.buas.nl>

High School Diploma

01/04/2019 – 01/04/2023

Sachdeva Global School | New Delhi, India

Website: <https://sachdevaglobal.in>

📁 Projects

Breda Guardians Esports Tool

01/09/2025 – 22/01/2026

Architected and deployed B.G.E.T., a comprehensive esports analytics platform for Breda Guardians team as part of an 18-week capstone project at BUAS. Built full-stack application using FastAPI backend with Poetry dependency management, React/TypeScript frontend

packaged as Electron desktop application, and PostgreSQL database. Integrated biometric sensors (Tobii Eye Tracker) with gameplay data from Riot Games and Henrik's Valorant API to provide real-time performance insights across Valorant and League of Legends. Implemented JWT authentication, role-based dashboards for coaches and players, and sophisticated timestamp-based correlation systems matching local recordings with online match events. Developed custom YOLO-based machine learning models deployed on separate AI server for reaction time analysis and map awareness detection, processing gameplay videos to generate annotated outputs and detailed metrics reports. Managed production deployment on BUAS Hive server via SSH/SFTP configuration.

Task Manager

I developed a full-stack task management application using Django, Python, HTML, CSS, JavaScript, and SQLite, with a mobile-friendly UI built using the Sketchy theme from Bootswatch. The application includes secure user authentication, allowing users to create, assign, update, and delete tasks. It features a personalized dashboard where users can manage their own tasks and view tasks assigned to them by others. Additionally, users can assign tasks to other logged-in users, set deadlines, and track task statuses. The project also includes task search functionality and a feedback form to collect user input, with all data stored in a SQLite database.

<https://github.com/rachitrevalia/django-project>

Library Management System

I developed a standalone Library Management System using Python for backend logic and SQLite for data storage. The system features a command-line interface (CLI) for user interaction and operates on standard desktop or laptop computers running Windows, macOS, or Linux. Designed to operate independently, it manages its database locally with no direct connections to external systems. The user interface communicates with the database through SQL queries executed by the Python script, ensuring efficient and reliable performance.

https://github.com/rachitrevalia/library_management_system

Flask-Bases Todo-Application

I undertook a project to develop a web-based Todo application using Python with Flask, SQLAlchemy (SQLite), HTML, and Bootstrap to manage tasks efficiently. The app enables users to add, edit, delete, and view tasks on the homepage, with a search feature to filter tasks by title or description. It tracks task creation time, incorporates Jinja templates for dynamic rendering.

Hotel Management

I undertook a project involving the seamless integration of Python and SQL. In this system, Python serves as the front-end, allowing users to input and store their data in an SQL database server, which functions as the back-end of the project. The primary functionality enables users to book rooms, either for individual use or for their family, based on criteria specified by the hotel. These criteria may include various room types, sizes, bed configurations, and more. Notably, all user data is automatically purged upon check-out, ensuring the removal of personal details from the system.
